**Periodontal disease** is a highly prevalent disease of the horse's mouth which can result in biting problems, painful eating and eventually weight loss. We are pleased to offer the following services at Langford.

**Full assessment, which includes the following:**

- Consultation
- Clinical examination
- Oral examination and endoscopy
- Radiography and occlusal views under sedation

**Mr Henry Tremaine**

B Vet Med MPhil Cert ES Dip ECVS MRCVS

Henry is a Specialist in Equine Surgery and teaches other veterinary surgeons the skills required to undertake dentistry procedures in a professional and compassionate manner. He is an RCVS and European Specialist in Equine Surgery, and has published and lectured widely internationally and in the UK.

**The following treatments are available for selection depending on the individual needs of the patient.**

- Correction of lesions causing soft tissue trauma
- Reduction of focal overgrowths and transverse ridges
- Diastema widening using water cooled instruments
- Periodontal clearance and debridement
- Periodontal stenting
- Intra oral antimicrobials
- Dental extraction if necessary

These are all performed under sedative/analgesic combinations, tailored to the individual patients needs after discussion with the owner, usually performed using local analgesic to improve the experience for the horse or pony.
