

Equine Periodontal Disease Investigation Special Package Price from only £250.

Periodontal disease is a highly prevalent disease of the horse's mouth which can result in biting problems, painful eating and eventually weight loss. We are pleased to offer the following services at the Equine Centre:

Full assessment, which includes the following:

- Consultation
- Clinical examination
- Oral examination and endoscopy
- Radiography and occlusal views under sedation

The following treatments are available for selection depending on the individual needs of the patient, but are **not included** in the special package price:

- Correction of lesions causing soft tissue trauma
- Reduction of focal overgrowths and transverse ridges
- Diastema widening using water cooled instruments
- Periodontal clearance and debridement
- Periodontal stenting
- Intra oral antimicrobials
- Dental extraction if necessary

These are all performed under sedative/analgesic combinations, tailored to the individual patients needs, after discussion with the owner, and usually performed using local analgesic to improve the experience for the horse or pony.

Langford

VETERINARY SERVICES
